

## Global Change

Why can't people think for themselves and know what is "Right" & "Wrong" !?!? Is it because of our poor education systems !?!?

I always thought we were too full of ourselves thinking we could alter the climate. We can't even alter the weather for 30 minutes. What makes people think we can alter the climate. After all the climate is basically the average weather over a period of time in a certain area. I'm not saying the climate doesn't change, but it not people doing it. And the earth has been warming up ever since the ice age, way before cars, trains and cargo ships.

NASA admits climate change occurs because of changes in Earth's solar orbit, not because of SUVs and fossil fuels.

*NASA has known for over 60 years that 'climate change' is natural and has been occurring for millions of years due to changes in earth's orbit and tilts in the earth's internal magnetic axis.*

*As stated in the article* **The climate change debate is not about science. It is an effort to impose political and economic controls on the population by the elite."**

NASA admits climate change occurs because of changes in Earth's solar orbit and tilts of our internal magnetic axis, not because of SUVs and fossil fuels.

For more than 60 years, the National Aeronautics and Space Administration (NASA) has known that the changes occurring to planetary weather patterns are completely natural and normal. But the space agency, for whatever reason, has chosen to let the man-made global warming hoax persist and spread, to the detriment of human freedom.

It was the year 1958, to be precise, when NASA first observed that changes in the solar orbit of the earth, along with alterations to the earth's axial tilt, are both responsible for what climate scientists today have dubbed as "warming" (or "cooling," depending on their agenda). In no way, shape, or form are humans warming or cooling the planet by driving SUVs or eating beef, in other words.

**But NASA has thus far failed to set the record straight, and has instead chosen to sit silently back and watch as liberals freak out about the world supposedly ending in 12 years because of too much livestock, or too many plastic straws.**

**In the year 2000, NASA did publish information on its Earth Observatory website about the Milankovitch Climate Theory, revealing that the planet is, in fact, changing due to extraneous factors that have absolutely nothing to do with human activity. But, again, this information has yet to go mainstream, some 19 years later, which is why deranged, climate-obsessed leftists have now begun to claim that we really only have 18 *months* left before the planet dies from an excess of carbon dioxide (CO<sub>2</sub>).**

**The truth, however, is much more along the lines of what Serbian astrophysicist Milutin Milankovitch, after whom the Milankovitch Climate Theory is named, proposed about how the seasonal and latitudinal variations of solar radiation that hit the earth in different ways, and at different times, have the greatest impact on earth's changing climate patterns.**

The below two images (by Robert Simmon, NASA GSFC) help to illustrate this, with the first showing earth at a nearly zero orbit, and the second showing earth at a 0.07 orbit. This orbital change is depicted by the eccentric, oval shape in the second image, which has been intentionally exaggerated for the purpose of showing the massive change in distance that occurs between the earth and the sun, depending on whether it is at perihelion or aphelion.

"Even the maximum eccentricity of the Earth's orbit - 0.07 - it would be impossible to show at the resolution of a web page," notes the *Hal Turner Radio Show*. "Even so, at the current eccentricity of 0.017, the Earth is 5 million kilometers closer to Sun at perihelion than at aphelion."

The biggest factor affecting earth's climate is the SUN.

As for earth's obliquity, or its change in axial tilt, the below two images (Robert Simmon, NASA GSFC) show the degree to which the earth can shift on both its axis and its rotational orientation.

At the higher tilts, earth's seasons become much more extreme, while at lower tilts they become much more mild. A similar situation exists for earth's rotational axis, which depending on which hemisphere is pointed at the sun during perihelion, can greatly impact the seasonal extremes between the two hemispheres.

## Precession

**Based on these different variables, Milankovitch was able to come up with a comprehensive mathematical model that is able to compute surface temperatures on earth going way back in time, and the conclusion is simple: Earth's climate has *always* been changing, and is in a constant state of flux due to no fault of our own as human beings.**

When Milankovitch first put forward his model, it went ignored for nearly half a century. Then, in 1976, a study published in the journal *Science* confirmed that Milankovitch's theory is, in fact, accurate, and that it does correspond to various periods of climate change that have occurred throughout history.

In 1982, six years after this study was published, the National Research Council of the U.S. National Academy of Sciences adopted Milankovitch's theory as truth, declaring that:... **orbital variations remain the most thoroughly examined mechanism of climatic change on time scales of tens of thousands of years and are by far the clearest case of a direct effect of changing insolation on the lower atmosphere of Earth. If we had to sum the whole thing up in one simple phrase, it would be this: The biggest factor influencing weather and climate patterns on earth is the sun, period.** Depending on the earth's position to the sun at any given time, climate conditions are going to vary dramatically, and even create drastic abnormalities that defy everything that humans thought they knew about how the earth worked.

But rather than embrace this truth, today's climate "scientists," joined by leftist politicians and a complicit mainstream media, insist that not using reusable grocery bags at the supermarket and not having an electric vehicle are destroying the planet so quickly that we absolutely must implement global climate taxes as the solution.

**"The climate change debate is not about science. It is an effort to impose political and economic controls on the population by the elite,"** wrote one commenter at the Hal Turner Radio Show.

"And it's another way to divide the population against itself, with some who believe in man-made global warming and some who don't, i.e. divide and conquer."

If this brief discussion starts your mind in the “Right” direction, keep on going !!!

The History Channel completed a 3-year documentary series of “How the Earth was Made” from 2007 through 2010.

I consider this 2007 pilot documentary the BEST overall:

<http://www.roycefamily.com/Videos/2007.How%20The%20Earth%20Was%20Made.mp4>

Global change has been happening since its beginning:  
(5 Billion years - Way longer than when humans arrived – 100 Thousand years ago or so).

Why would anyone think "Global Change" can stop – OR – be reversed ?!?!

(It simply is and has to be – OR – We, and everything on Earth, would die)

The complete 27 episodes of "How the Earth was Made" can be purchased on Amazon.com for around \$55.

<https://www.amazon.com/s?k=how+the+earth+was+made>

The complete list of episodes is here:

[https://en.wikipedia.org/wiki/How\\_the\\_Earth\\_Was\\_Made](https://en.wikipedia.org/wiki/How_the_Earth_Was_Made)

Many episodes are on YouTube for FREE

[https://www.youtube.com/watch?v=df\\_wlhfrlrI&list=PLob1mZcVW\\_Oajq6oVD\\_f2I2-gPZk4zvN7S](https://www.youtube.com/watch?v=df_wlhfrlrI&list=PLob1mZcVW_Oajq6oVD_f2I2-gPZk4zvN7S)

If you watch the complete series, you will learn:  
The continents, oceans, lakes, mountains, Grand Canyon,  
trees, all species, etc., etc., etc. have not always been here.

95% of all species that have ever been on Earth are extinct:  
(humans will be extinct someday).

Sea fossils have been found on the "Matter Horn":  
(which means it was under the sea).

Palm leaf fossils have been found at the "North Pole":  
(which means that the average temperature had to be above 50  
degrees).

As a boy, I remember hearing about an "Ice Age". Watching the  
complete series, you will learn there have been 11 "Ice Ages".  
Humans and all other mammals are "allowed" to live on Earth  
today only because we are between "Ice Ages":  
(which means there has been "Global Warming" in between).

And much - much - much more !!!

If you are concerned about "Global Change" AFTER viewing a  
few of these – That does not change anything – You simply are  
not even trying !!!
